

Lab 01 – 16-09-2024

Type following in Dev CPP and run. TAs are there to guide you. During the lab, discussion with class fellows is strictly discouraged. You may get severe penalty of doing so. There is no evaluation in first lab. Everyone will be awarded 10 marks, however, you may lose marks by violating the restrictions.

1. "First.cpp"

```
#include <iostream>

using namespace std;

int main() {
    cout << "My First Program in C++";
    return 0;
}
```

2. "Second.cpp"

```
#include <iostream>

using namespace std;

int main() {
    cout << "First Line.\nSecond Line.\nThird Line.";
    cout << "Fourth Line.\n";
    cout << "Fifth Line.\n";
    return 0;
}
```

3. "Third.cpp"

```
#include <iostream>

using namespace std;

int main() {
    cout << "6 + 4 = " << 6 + 4 << '\n';
    cout << "6 / 4 = " << 6 / 4 << '\n';
    cout << "6 / 4.0 = " << 6 / 4.0 << '\n';
    return 0;
}
```

4. "Four.cpp"

```
#include <iostream>

using namespace std;

int main() {
    int x = 13, y = 5;
    cout << "X = " << x << " Y = " << y << '\n';
    cout << "X + Y = " << x + y << '\n';
    cout << "X - Y = " << x - y << '\n';
    cout << "X * Y = " << x * y << '\n';
    cout << "X / Y = " << x / y << '\n';
    return 0;
}
```

Task 1: Complete following program to print table (of 5 using variable x) in the given format using ten output statements:

```
#include <iostream>

using namespace std;

int main() {
    int x = 5;

    return 0;
}
```

5 x 1 = 5
5 x 2 = 10
5 x 3 = 15
5 x 4 = 20
5 x 5 = 25
5 x 6 = 30
5 x 7 = 35
5 x 8 = 40
5 x 9 = 45
5 x 10 = 50

Task 2: Assign different values to x & y and check output/ result of the following operators, I have written two for you:

```
#include <iostream>

using namespace std;

int main() {
    int x = 5, y = 7;
    cout << (x < y) << '\n';
    cout << (x > y) << '\n';

    return 0;
}
```

Relational Operators

==
!=
>
>=
<
<=

Task 3: Assign different values to x, y & z. Check output/ result of the following logical & relational operators, I have written two for you:

```
#include <iostream>

using namespace std;

int main() {
    int x = 5, y = 7, z = 6;
    cout << (x > y && y > z) << '\n';
    cout << (!(x > y)) << '\n';

    return 0;
}
```

Logical Operators

&&	Logical And
	Logical Or
!	Not
