

QUIZ 2 (Dated: 23 Oct 2024)
Data Structures and Algorithm Analysis

Roll No: _____

Name: _____

Q1. Write a member function for class Linked List to print all pair of nodes, which are in order (left element is smaller or equal to right element)?

Q2. Consider linked list with three pointers pointing at particular nodes. Perform next operations. Redraw list & write first six outputs of the print statement. Ignore any logical issues?

head -> 23 -> 46 -> 39 -> 24 -> 48 -> 35 -> x
 ↑ ↑ ↑
 t1 t2 t3

t1->next=t3;

t2->next=t1;

head->next=t3;

t3->next=t2;

```
for (t1 = head ; t1 != NULL ; t1 = t1 -> next)
    cout << t1 -> data << ' ';
```

Q3. Write a class **Record** having class record. The class will store, roll nos and cgpa's of the students. Write following member functions:

- int getCount() const
- void addRecord(int roll_no, float cgpa)
- int indexMaxCGPA() const
- void modifyRecord(int roll_no, float cgpa)
