

QUIZ 5 (Dated: 04-11-2024)
Data Structures and Algorithm Analysis

Roll No: _____

Name: _____

Q1. An integer vector has numbers 0 to 9 only. A duplicate removal consists of choosing two adjacent and equal numbers and removing them. We repeatedly make duplicate removals until we no longer can. Return the final list of values after all such duplicate removals have made. Sample input/ output given in the box.

Input: {3,5,5,3,8,3}
Output: {8,3}
Input: {3,7,5,5,7,4}
Output: {3,4}

Q2. Fill array with first five letters of your first name and run the code. Show complete working and output.

```
void print (char x[], int i, int n){
    if (i >= n) return;
    print (x, i + 1, n);
    cout << x[i] << ' ';
    print (x, i + 2, n);
}
int main(){
    char c[5]={' ', ' ', ' ', ' ', ' '};
    print(c, 0, 5);
    return 0;
}
```
